Problem

Vector-2, Example-1, Question-20

The line joining the points $\begin{pmatrix} -6 \\ 8 \end{pmatrix}$ and $\begin{pmatrix} 8 \\ -6 \end{pmatrix}$ is divided into four equal parts; Find the coordinates of the points of section.

Solution:

Let us consider the coordinate of points **D, E, F** which divides the line segment **A** and **B** into four equal parts.

In the ratio of **m:n** is given by the section formula:

$$S = \frac{mB + nA}{m + n} \quad (0.0.1)$$

The coordinate of point **D** which divide the line joining **A** and **B** in the ratio of **1:3** is given that,

$$A = \begin{pmatrix} -6 \\ 8 \end{pmatrix}, B = \begin{pmatrix} 8 \\ -6 \end{pmatrix} \quad (0.0.2)$$

$$D = \frac{1B + 3A}{4} \quad (0.0.3)$$

$$= \frac{1 \begin{pmatrix} 8 \\ -6 \end{pmatrix} + 3 \begin{pmatrix} -6 \\ 8 \end{pmatrix}}{4} \quad (0.0.4)$$

$$= \frac{1}{2} \begin{pmatrix} -5 \\ 9 \end{pmatrix} \quad (0.0.5)$$

The coordinate of point **E** which divide the line joining **A** and **B** in the ratio of **1:1** is given that,

$$E = \frac{1B + 1A}{2} \quad (0.0.6)$$

$$= \frac{1 \begin{pmatrix} 8 \\ -6 \end{pmatrix} + 1 \begin{pmatrix} -6 \\ 8 \end{pmatrix}}{2} \quad (0.0.7)$$

$$= \frac{1}{2} \begin{pmatrix} 2 \\ 2 \end{pmatrix} = \begin{pmatrix} 1 \\ 1 \end{pmatrix} \quad (0.0.8)$$

The coordinate of point **F** which divide the line joining **A** and **B** in the ratio of **3:1** is given that,

$$F = \frac{3B + 1A}{4} \quad (0.0.9)$$

$$= \frac{3 \begin{pmatrix} 8 \\ -6 \end{pmatrix} + 1 \begin{pmatrix} -6 \\ 8 \end{pmatrix}}{4} \quad (0.0.10)$$

$$= \frac{1}{2} \begin{pmatrix} 9 \\ -5 \end{pmatrix} \quad (0.0.11)$$

Fig. 0: Plot obtained from python code use this points $D = \frac{1}{2} \begin{pmatrix} -5 \\ 9 \end{pmatrix}$, $E = \begin{pmatrix} 1 \\ 1 \end{pmatrix}$, $F = \frac{1}{2} \begin{pmatrix} 9 \\ -5 \end{pmatrix}$
